

## Map Sensor / Sub-System Tester

CTI Model #234

The concept Technology "MAP Sensor/ Sub-System Tester" allows you to test MAP sensors and the MAP sensor sub-systems for correct operation.

The "MAP" tester is a microprocessor-based hand-held unit with a 3 digit L.E.D. display and a 15-button keypad. The tester, when connected to the vehicle battery, will self test and "power up" automatically. The "MAP" tester is capable of testing the "MAP" sensor over its entire operating range against a precision internal benchmark sensor.

The "MAP" tester can check the "MAP" sensor without removing it from the vehicle. The tester will check the vehicle sensor Vref, signal, and ground wire to insure proper voltage and ground. Sensors, new or used, not connected to a vehicle may also be tested with the CTI #234 MAP sensor tester.

The "MAP" tester can be programmed to test Delco Electronics, Motorola, and Kavlico map sensor calibrations.

The Model #234K kit consists of the Concept Model...

- #234 MAP Sensor Tester
- #234GI General Motors Gen I Weatherpack Adapter
- #234GII General Motors Gen II Micropak Adapter
- #202 Small Storage Case
- #234M Operators Manual

Also Available for the CTI #234 ...

- #234CM Chrysler/Motorola adapter
- #234CK Chrysler/Kavlico adapter
- #234P Deluxe Hand Pump

- 2 YEAR LIMITED WARRANTY
